■ Introduction

This report summarizes a data collection and processing effort undertaken to provide a dataset of arterial vehicle trajectories data completed as part of the Federal Highway Administration's (FHWA) Next Generation Simulation (NGSIM) project, and provides a detailed analysis of a subset of the data. The data analyzed in this report represent vehicle trajectories on a segment of Peachtree Street in Atlanta, Georgia collected between 12:45 p.m. and 1:00 p.m. on November 8, 2006. Aggregate summaries of flow and speed of the vehicles, number of lane changes, headway and gap analysis, and an input-output analysis of flows are provided. The results are aggregated by time and intersection.

Study Area Description

Data presented in this report represent travel on Peachtree Street, an arterial running primarily north-south in Atlanta, Georgia. The speed limit on the Peachtree Street is 35 mph. These data were collected using video cameras mounted on a 30-story building, which is located at 1100 Peachtree Street NE, Atlanta, Georgia.

Figure 1 provides an aerial image of the location with the camera coverage. Figure 2 presents a schematic illustration of the location for the vehicle trajectory dataset. The site was approximately 2,100 feet in length, with five intersections and two to three arterial through lanes in each direction through the section. Lane numbering is incremented from the left-most lane.

Video data were collected using eight video cameras, cameras 1 through 8, with camera 1 recording the southernmost and camera 8 recording the northernmost section of the study area, as shown in Figure 1. Digital video images were collected over an approximate 6.5-hour period from 9:30 a.m. to 1:30 p.m. and from 4:00 p.m. to 6:30 p.m. on November 8, 2006, and 4-hour period from 8:00 a.m. to 12:00 p.m. on November 9, 2006. Complete vehicle trajectories were transcribed for two 15 minute periods -- one from 12:45 p.m. to 1:00 p.m. and the other from 4:00 p.m. to 4:15 p.m. -- for a total of 30 minutes at a resolution of 10 frames per second. The data in this report summarizes only the period from 4:00 p.m. to 4:15 p.m.

Figure 1. Study Area and Camera Coverage

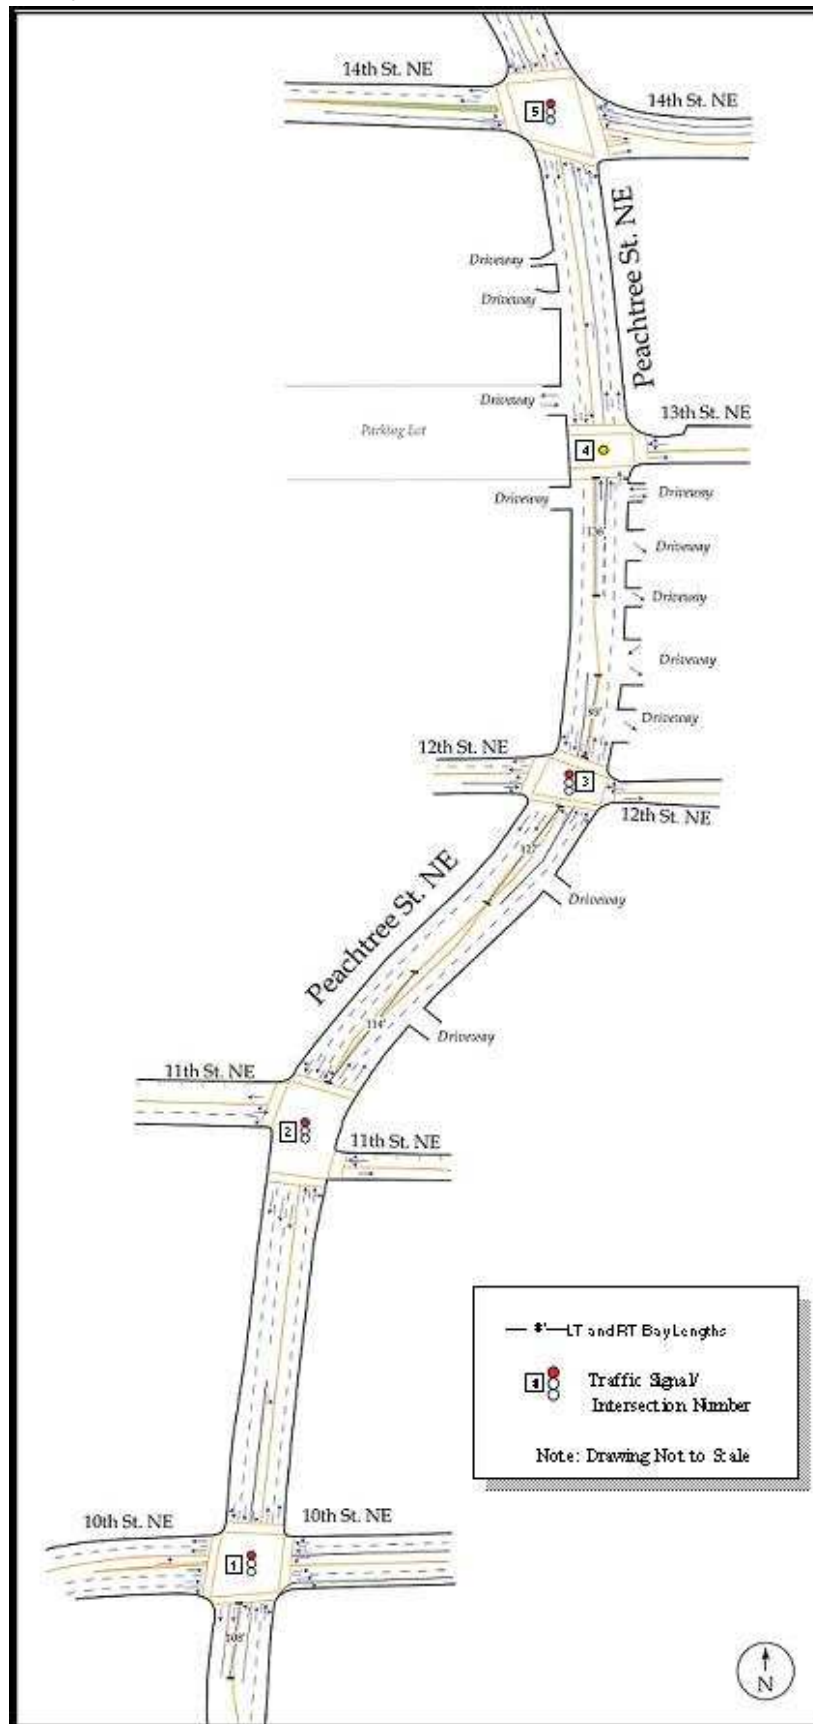

Figure 2. Study Area Schematic

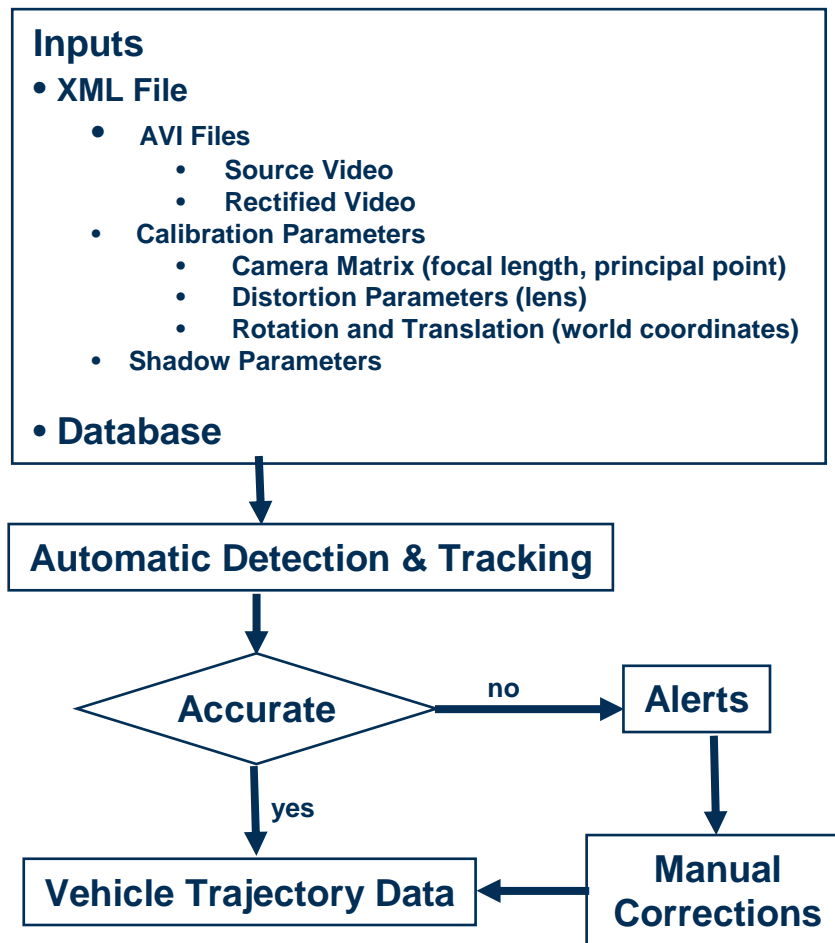

Vehicle Detection and Tracking

Vehicle trajectory data were transcribed from the video data using a customized software application, Next Generation - Simulation Vehicle Interaction and Detection Environment for Operations (NGSIM-VIDEO), developed for NGSIM. This program detects and tracks vehicles from video images and transcribes the trajectory data to a database.

The flow process for the vehicle transcription is shown in Figure 3. The software detects vehicles in a user-defined detection zone, and then tracks vehicles from the point of detection.

Figure 3. Vehicle Detection and Tracking Process

Tracking was performed for the data from 12:45 p.m. to 1:00 p.m. Immediately after 1:00 p.m., vehicle detection was stopped; however, to account for full vehicle trajectories, tracking continued to allow the vehicles which were already detected to be tracked completely to the end of the study area. Therefore, for the vehicle trajectory dataset of 12:45p.m. to 1:00 p.m., the actual tracking time is from 12:45:00 p.m. to 1:02:01 p.m.

A total of 30 minutes of vehicle trajectories was processed from the video data collected on November 8, 2006, representing the period from 12:45 p.m. to 1:00 p.m. and 4:00 p.m. to 4:15 p.m. The data was divided into two 15-minute periods for processing and analysis.

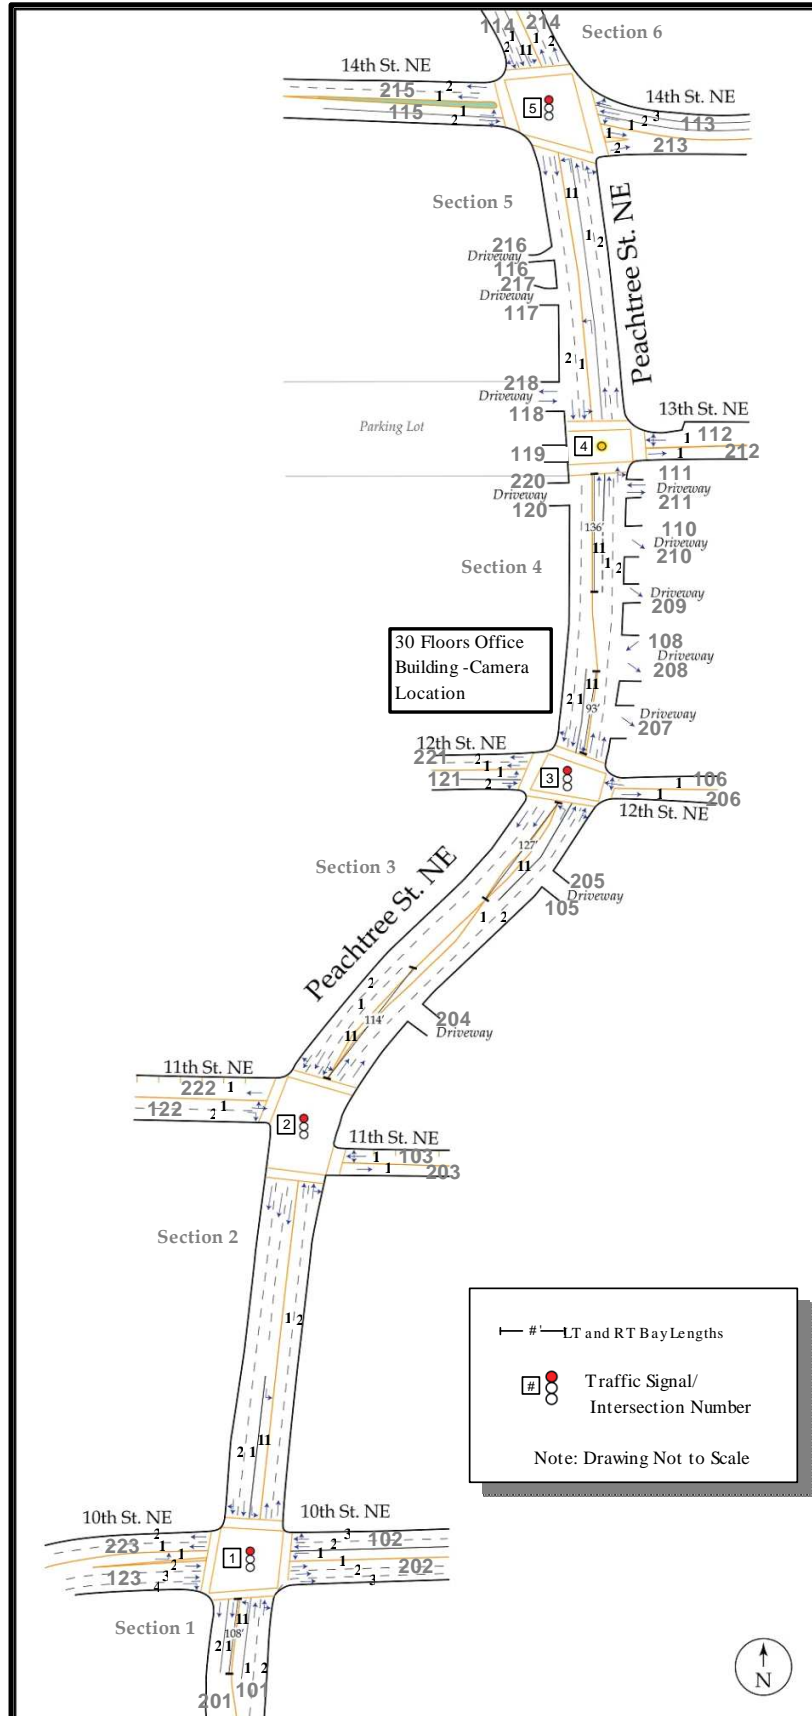

Subsequent sections of this report provide analysis of the transcribed data. This report provides data analysis for the period from 12:45 p.m. to 1:00 p.m. A separate report is available providing the same performance statistics for the succeeding 4:00 p.m. to 4:15 p.m. period.

■ Data Analysis

Data analysis was performed for specific locations in the study area. Therefore, it is necessary to define those locations herein. Figure 4 shows the study area schematic with identification numbers for origins, destinations, intersections, sections, and lanes.

- **Origin** – These were numbered from 101 through 123. There are 20 origins in the study area. Destinations 204, 207, and 209 are one-way parking lot entries; hence, there are no associated origin numbers 104, 107, and 109.
- **Destination** – There are 22 destinations in the study area, numbered from 201 through 223. Origin 119 is a one-way parking lot exit; hence, there is no associated destination number 219.
- **Intersection** – These were numbered from 1 to 5, with intersection 1 at the southernmost, and intersection 5 at the northernmost section of the study area. Intersections 1, 2, 3, and 5 in this report correspond to signal numbers 51, 52, 53, and 73, respectively (Intersection 4 is a stop-controlled intersection).
- **Section** – Peachtree St. was further divided into six sections between neighboring intersections.
- **Lane** – Lane numbering was incremented from the lane closest to the median, except for locations where left-turn or right-turn bays exist. Left-turn bays were numbered starting from 11 and were incremented from the left-turn bay closest to the median.

Figure 4. Study Area Schematic with Various Identification Numbers

Vehicle Type

Vehicles are classified into three categories: 1) motorcycle, 2) automobile, and 3) truck and buses. The distribution of vehicle types is shown in Table 1.

Table 1. Vehicle Type

Time Period	Motorcycle		Automobile		Truck and Buses		All	
	Vehicle	Percentage	Vehicles	Percentage	Vehicles	Percentage	Vehicles	Percentage
12:45 p.m.-12:50 p.m.	0	0.0%	354	97.5%	9	2.5%	363	100.0%

All	0	0.0%	1,092	97.9%	23	2.1%	1,115	100.0%

Origin-Destination Distribution

There are 20 origins and 22 destinations in the study area, as illustrated in Figure 4. The distribution of vehicles from origins to destinations is provided in Table 2.

Table 2. Origin-Destination Distribution

Origin	Destination																						Sum

Traffic Volume Analysis

The tables in this section provide traffic volume for each intersection. Intersections are numbered as 1, 2, 3, 4, and 5, as shown in Figure 4, and include:

1. Peachtree and 10th Street NE,
2. Peachtree and 11th Street NE,
3. Peachtree and 12th Street NE,
4. Peachtree and 13th Street NE,
5. Peachtree and 14th Street NE.

Traffic volume is grouped by moving direction [i.e., north-bound (NB), south-bound (SB), east-bound (EB), and west-bound (WB)], by movement [i.e., through (TH), left-turn (LT), and right-turn (RT)], by lane, and by time period.

Due to the severe shooting angle of the cameras, several of the start and end-lanes for Intersections 1 and 5 were obscured. Hence for volume analysis, vehicle volumes by movement were aggregated for multiple start/end lanes as indicated in the tables below. .

Table 3. Traffic Volume at Intersection 1 (in Vehicles)

Time Period	NB				SB				EB			WB			Sum

Speed Analysis

Speed analysis was performed at the midpoints of each section on Peachtree Street, which are between two neighboring intersections as shown in Figure 4. The following tables provide average speeds for both moving directions (NB and SB) and for each lane.

Table 8. Average Speed in Section 2 (NB) (Feet Per Second)

Travel Time Analysis

Average travel times for vehicles traveling NB on Peachtree Street from the southernmost to the northernmost section of the study area are provided in Table 16, representing a distance covered of approximately 2022 ft. Similarly, average travel times for vehicles traveling SB on Peachtree Street from the northernmost to the southernmost section of the study area are provided in Table 17, representing a distance covered of approximately 1950 ft.

Table 16. Average Travel Time on Peachtree St. (NB) (in Seconds)

From Lane To Lane	1		2		Average
	1	2	1	2	
12:45 p.m.-12:50 p.m.	156.3	146.9	121.8	149.7	143.7

Average	106.1	105.9	105.1	104.7	105.1

Lane Change Analysis

An analysis of lane changes occurring in the study area is provided in this section. It should be noted that vehicles making either left turns or right turns to the closest receiving lane were not counted as lane changes. The number of lane changes per vehicle for all vehicles in the study area is shown in Figure 5. The number of lane changes by each origin-destination (O-D) pair is provided in Table 18. Table 19 provides the average lane changes by each O-D pair, which was calculated by dividing the number of lane changes by the number of vehicles for that O-D pair.

Headway Analysis

Tables 20 and 21 provide average headway of vehicles traveling on Peachtree Street NB and SB, respectively. In addition to average headway for each time period, headways were also analyzed based on vehicle speed (i.e., less than 5 mph, 5 to 20 mph, and more than 20 mph).

Table 20. Average Headway on Peachtree Street (NB) (in Seconds)

Time Period	Speed (mph)			Average Headway
	<5	5-20	>20	
12:45 p.m.-12:50 p.m.	106.02	8.81	6.19	29.53
12:50 p.m.-12:55 p.m.	77.90	10.34	5.58	20.54
12:55 p.m.-1:00 p.m.	286.22	12.98	5.13	106.29
Average Headway	193.72	10.59	5.59	56.61

Table 21. Average Headway on Peachtree Street (SB) (in Seconds)

Time Period	Speed (mph)			Average Headway
	<5	5-20	>20	
12:45 p.m.-12:50 p.m.	38.46	17.79	11.43	15.43
12:50 p.m.-12:55 p.m.	63.65	12.09	7.23	16.82
12:55 p.m.-1:00 p.m.	234.68	14.24	8.28	77.02
Average Headway	176.22	14.26	8.44	44.28

Spacing Analysis

Spacing, or distance headway, was analyzed for each time period and for each speed group. Tables 22 and 23 provide average spacing of vehicles traveling on Peachtree Street NB and SB, respectively.

Table 22. Average Spacing on Peachtree Street (NB) (in Feet)

Time Period	Speed (mph)			Average Spacing
	<5	5-20	>20	
12:45 p.m.-12:50 p.m.	28.16	145.85	215.42	109.24
12:50 p.m.-12:55 p.m.	29.50	164.03	204.86	112.38
12:55 p.m.-1:00 p.m.	39.24	183.95	180.99	114.38
Average Spacing	32.34	163.06	199.32	112.05

Table 23. Average Spacing on Peachtree Street (SB) (in Feet)

Time Period	Speed (mph)			Average Spacing
	<5	5-20	>20	
12:45 p.m.-12:50 p.m.	29.72	286.04	368.77	256.29
12:50 p.m.-12:55 p.m.	27.46	215.86	271.27	188.99
12:55 p.m.-1:00 p.m.	29.11	250.29	297.79	191.30
Average Spacing	28.60	245.61	299.27	201.81

Gap Analysis

Tables 24 and 25 present the accepted lead and lag gaps by vehicles during lane-changing on Peachtree Street NB and SB, respectively. In addition to average gaps for each time period, lead and lag gaps were also analyzed based on vehicle speed (i.e., less than 5 mph, 5 to 20 mph, and more than 20 mph).

**Table 24. Average Lead and Lag Gaps on Peachtree Street (NB)
(in Feet)**

Time Period	Lead Gap (Feet)				Lag Gap (Feet)			
	<5 mph	5-20 mph	>20 mph	Average	<5 mph	5-20 mph	>20 mph	Average
12:45 p.m.-12:50 p.m.	-	66.00	73.80	71.57	-	156.50	90.60	109.43
12:50 p.m.-12:55 p.m.	-	80.50	63.71	67.44	-	145.50	84.57	98.11
12:55 p.m.-1:00 p.m.	-	132.67	89.50	115.40	-	54.00	43.50	49.80
Average	-	98.71	71.00	80.24	-	109.43	80.86	90.38

**Table 25. Average Lead and Lag Gaps on Peachtree Street (SB)
(in Feet)**

Time Period	Lead Gap (Feet)				Lag Gap (Feet)			
	<5 mph	5-20 mph	>20 mph	Average	<5 mph	5-20 mph	>20 mph	Average
12:45 p.m.-12:50 p.m.	-	-	126.00	126.00	-	-	105.50	105.50
12:50 p.m.-12:55 p.m.	-	47.00	63.00	57.67	-	73.50	96.75	89.00
12:55 p.m.-1:00 p.m.	-	-	104.00	104.00	-	-	50.00	50.00
Average	-	47.00	86.86	78.00	-	73.50	92.57	88.33
